

## Lesson Plan

### Writing in Binary

**Book:** *Coding Basics*

**Series:** Coding

**Level:** Navigator

### Objective

To help students build their understanding of binary languages (and their applications to programming) by writing and decoding simple messages.

### Supplies

- *Coding Basics* book
- Binary Alphabet handout (attached)
- Crack the Code worksheet (attached)
- Pencils and paper

### Before the Activity

Read *Coding Basics* out loud to students, or assign it to students to read on their own.

### Activity

Choose a student to read the “Computer Talk” sidebar on page 18. This sidebar describes machine language. Machine language is an example of a binary language. The word *binary* describes a way of representing information with only two options. In computers, the options are a zero or a one. But any other set of two options can be used to represent language in binary. For example, show students the Binary Alphabet handout. This handout uses two kinds of squares (filled-in and hollow) to represent the letters of the alphabet.

Give each student a Crack the Code worksheet. Students should use the Binary Alphabet handout to decode the message on this worksheet. When students finish, they should choose a partner. Students should write a one-sentence message to their partner, writing blanks to the left of each binary letter like on the Crack the Code worksheet. Then, students should trade pages and attempt to decode their partner’s message.

After students have traded and decoded their messages, come back together as a class for a short discussion. Call on a few students to describe differences between writing a sentence in binary and writing a sentence in English. At some point, a student will likely mention that each letter takes a long time to write in binary. Explain that this is one of the reasons programmers often choose languages other than machine language to write code. Those languages have

more than two options, so they don't take nearly as long to write—much like the English alphabet has 26 letters, so it's much faster and easier to write words in English.

**Evaluation**

Use the attached answer key to score students' worksheets, for up to 27 points.

**Standards**

This lesson may be used to address the Common Core State Standards' speaking and listening standards, grade 5 (SL 5.1), and the National Science Education Standards' Content Standard E, grades 5–8.
